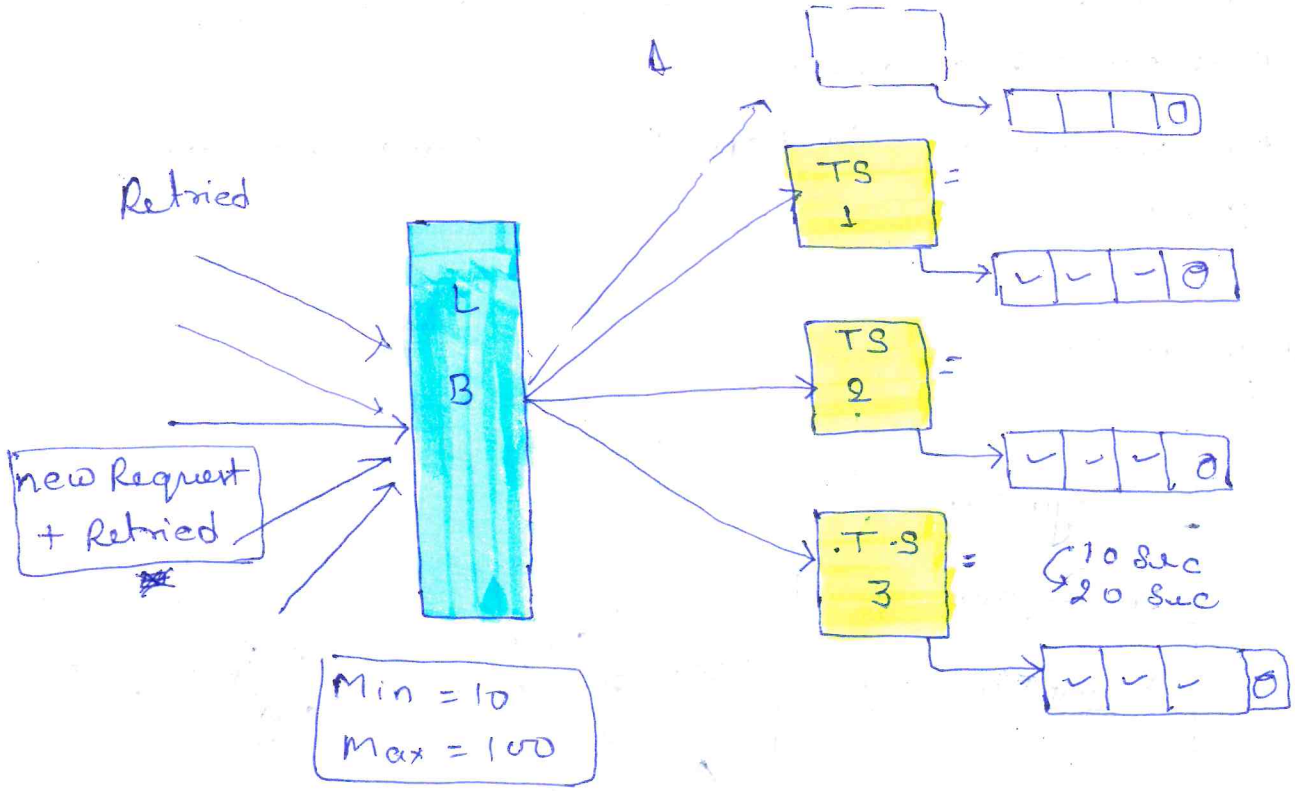
① Thundering Herd Problem | Why Ticket Booking app goes down during peak traffic

Lecture 64

Thundering Herd  12:00PM Sale has started



* Each Instances queue is also filled all Instances Thread are busy. When a time more request come there will be not entertaining any new request. So What happning is

① × New Request got denied

② Retry

Solution

① Exponential Back off

Base * $2^n$  n = number of failures

$R_1 \Rightarrow 100 \times 2^1 = 200$ milisecond

Retry 2 $\Rightarrow 100 \times 2^2 = 400$ milisecond

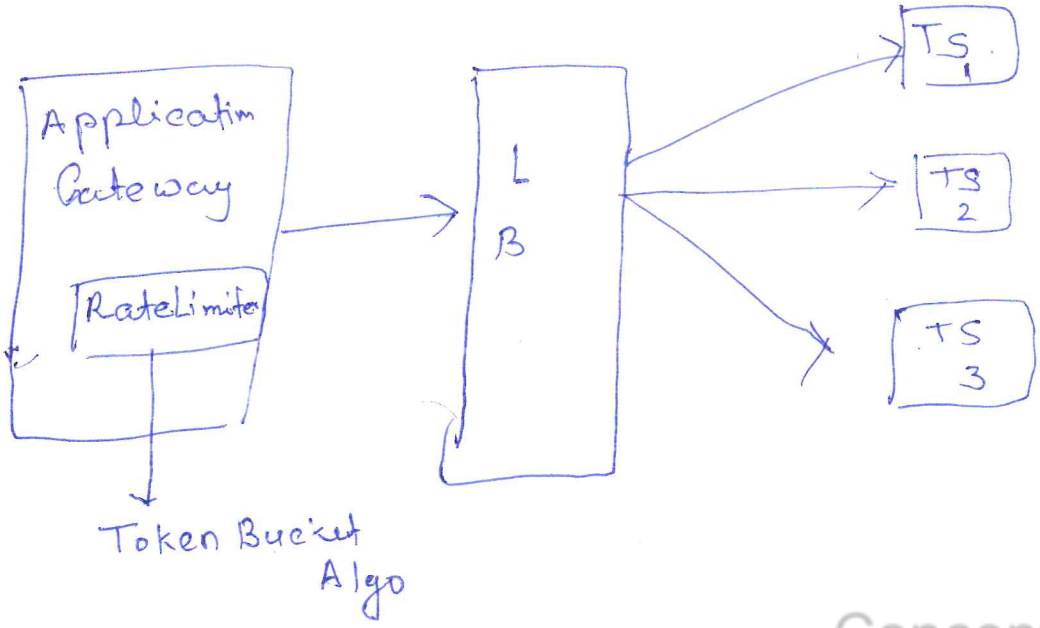
Concept && Coding

## (2) Exponential Backoff + Jitter

Bringing some Randomness

$= (\text{Base} \times 2^n)$

min ( Max wait Time , Random $(0, B \times 2^n)$ )



Concept && Coding
